EDUCATION

Northeastern University September 2023 – December 2026
Bachelor of Science in Computer Science *Boston, MA*

- GPA: 3.8/4.0 | Relevant Courses: Software Engineering, Algorithms & Data Structures, Object-Oriented Design, Database Design, AI, Machine Learning, Reinforcement Learning, Computer Vision, Operating Systems

EXPERIENCE

Cloudflare June 2026 - August 2026
Software Engineer Intern *Austin, TX*

- Maintained Cog, the open-source ML packaging tool (9.5k stars) behind Workers AI models, shipping features including static input validation, native OTEL support, new concurrency API, and weight push/pull progress bars
- Shipped cog playground, a web UI for testing models with input validation, SSE output, and media previews
- Added distributed tracing to internal model serving infrastructure, and structured logging across Cog, vLLM, and Deepgram backends, enabling per-request debugging and production inference benchmarking
- Migrated 6 production models from Replicate to Workers AI; contributed to internal registry and control plane

MasterControl January 2026 - June 2026
Software Engineer Co-op, AI/ML *Boston, MA*

- Architected a unified AI platform in Spring AI serving 8.6M+ requests/day, providing a common API with configurable model routing for self-service LLM integration and end-to-end streaming inference across teams
- Built an experimental ML recommendation pipeline for Deviations Analyzer suite using 30K+ deviations, clustering root-cause and mitigation data and using vector search to recommend investigation strategies

Generate Product Development Club January 2026 - Present
Software Engineer *Boston, MA*

- Built Go backend services for real-time trip collaboration and timeline management in a React Native iOS app
- Developed Pub/Sub architecture for real-time updates, and features like polls, activity feed, and user fan-out

Massachusetts National Guard September 2025 – December 2025
Lead Software Engineer, University Practicum *Boston, MA*

- Led a team of 8 engineers to design and ship a centralized communications and mentor matching platform for 4,000+ troop members, scoping requirements directly with unit leadership
- Automated mentor-mentee pairing using hybrid search across profile similarity, availability, and mentor load
- Built S3-backed file sharing and Web Push notifications delivering documents and alerts to troops' phones

Priceline January 2025 – June 2025
Software Engineer Co-op, Backend *New York, NY*

- Led integration and A/B testing of Google Vertex AI Search for the Penny chatbot's search service in coordination with Google engineers, improving result relevance by around 25% across two evaluation metrics
- Developed Kafka pipeline for real-time hotel price alerts, streaming 1M+ events/day with high throughput

PROJECTS

AnimeDiscovery | *Python, TypeScript, pgvector, Dagster*

- Built an anime recommendation engine on Cap'n Web RPC with stateless personalization, two-stage retrieval and reranking in pgvector, and weekly ETL pipelines in Dagster

OpenLegislation (HackHarvard 2024 Winner) | *JavaScript, Node.js, Transformers.js*

- Led a team of 4 to build a legislation discovery platform powered by semantic search, helping analyze U.S. Congressional bill supporters and enhance candidate transparency ahead of the 2024 presidential election

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, Go, SQL, JavaScript, Kotlin, Rust
Technologies: Spring Boot, Spring AI, Kafka, gRPC, GraphQL, Node.js, React.js, PyTorch, FastAPI
Databases: MySQL, PostgreSQL, BigQuery, Bigtable, Redis, Elasticsearch, MongoDB
Infrastructure: AWS, GCP, Cloudflare, Docker, Kubernetes, Terraform, Linux, ArgoCD, OpenTelemetry
